

Corn (for silage)

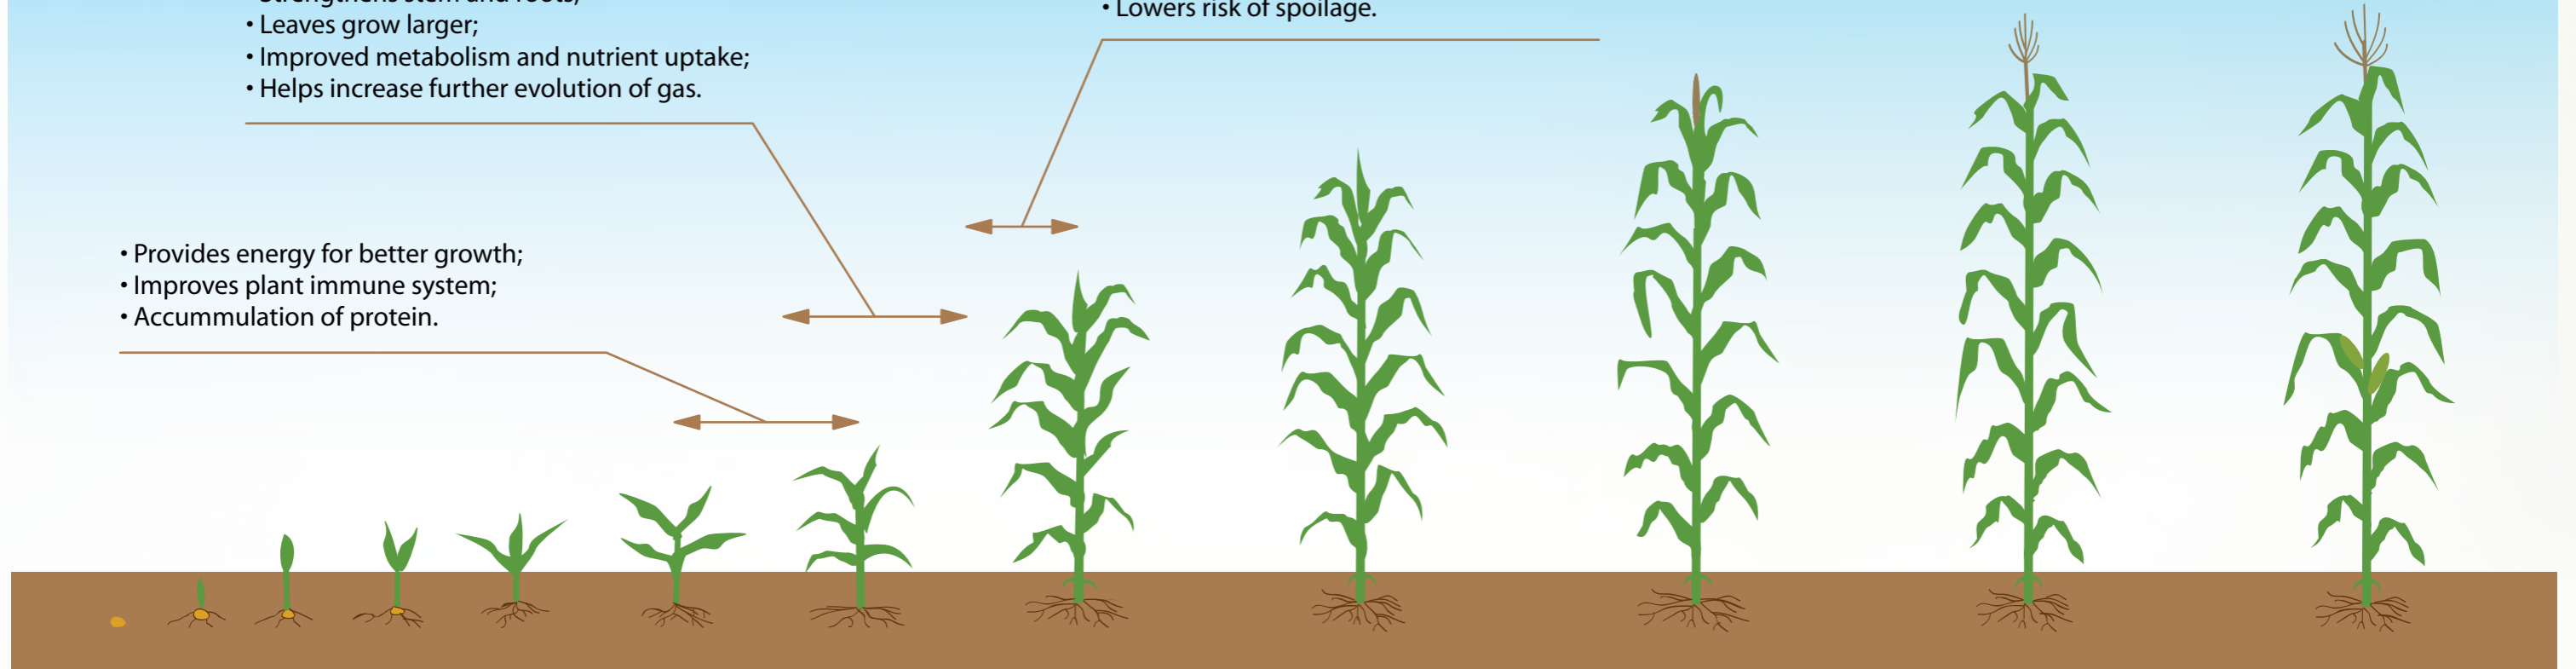

Plant growth stages	Before sowing							Harvest
		0-9	10-20	20-35	35-40	40-50	51-80	80

Corn (for silage). Benefits

- All needed macro- and microelements are supplied at the right moment;
- Strengthens stem and roots;
- Leaves grow larger;
- Improved metabolism and nutrient uptake;
- Helps increase further evolution of gas.

- Provides energy for better growth;
- Improves plant immune system;
- Accumulation of protein.

- High-K fertilizer with microelements helps grow a volume and high quality silage;
- Lowers risk of spoilage.
